

Sanitation Retrofit Kit for MQRF Purifier.

Innovative retrofits for greater sanitation.

Grain Milling
Customer Service

The purifier is one of the key machines in your production plant. This retrofit kit will allow you to attain the latest sanitation standards with your existing MQRF.

Requirements and legal regulations regarding sanitation are constantly increasing. Product streams are expected to have increasingly higher mechanical protection. The “Stainless Steel Side Door” retrofit kit shuts off the only opening of your MQRF machine. This greatly further reduces the risk of unwanted objects entering the product stream.

In order to ensure unrestricted access when making adjustments, the doors can easily be removed and reinstalled without the need for tools.

Advantages

- The latest sanitation standards
- Rugged stainless steel construction
- Quick and easy installation

Sanitation Retrofit Kit for the MQRF Purifier.

Description	Required number for a purifier	Order number	Qty
