

Conversion kit MicroMedia Invicta

**Grinding & Dispersing
Customer Service**

The new MicroMedia Invicta brings you a step-change in bead mill technology, with innovative chamber design and an improved bead separator system that deliver remarkable wet grinding benefits.

With this conversion kit, you can upgrade your existing MicroMedia X, MicroMedia P or SuperFlow and benefit from the process engineering advantages of the MicroMedia Invicta. For this purpose, an individual conversion package is put together that reduces conversion costs to a minimum, taking into account the current state of the machine.

Compared to the MicroMedia X, you can reduce the specific energy input by up to 25%, cut the running time in half and double the flow rate. Invicta now delivers the same high product quality as MicroMedia X, using significantly less energy. And although the chamber is slightly longer, it still fits the same footprint on your factory floor.

New bead separation system creates a more reliable process

The re-modelled bead separation system and a new screen design reduce blockages and pressure build-up. As well as helping you to achieve your target particle size faster, this also assures you of improved process safety, with maximum reliability.

View into the process chamber

Benefits

- 25% higher efficiency
- 50% higher productivity
(allows to manage production peaks)
- 100% higher flow rates

Compared to MicroMedia X3 in recirculation mode

Available materials

DraisResist, Ceramic SSiC, Polyamide

Optional increase in drive power [kW]

Depending on the individual product application

Scope of the upgrade package

- Customized MicroMedia Invicta process zone
- All necessary additional parts
- Assembly work
- Commissioning
- Upgrade of the drive unit if needed

Further upgrade options

- Process optimization
- Upgrade of the machine control
- Upgrade to the current ATEX version
- Revision of the complete machine in our service center
