

Innovations for a **better world.** 

## Bühler discharge and blow-through airlocks. **Dependable and efficient.**

The blow-through airlock MPSS ensures a direct product feed into pneumatic conveying lines, while the discharge airlock MPST is used for discharging bulk material following filters, cyclones and bins. Both airlocks not only meet the highest sanitation standards, but also feature a very sturdy design and a high operational reliability.

Pneumatic mill stock conveying system: airlock table with cyclone and discharge airlock MPST.

## High operational reliability.

The sturdy design and the high-precision manufacture of the airlocks increase their operational reliability and reduce the cost of operation. In the ExP version the airlocks are designed to be explosion pressure shock resistant and flameproof.

## Dependable and efficient.

All airlocks are manufactured with high precision and ensure a reliable operation with minimum air leakage. Due to very little wear, the maintenance costs can be reduced while the durability of the airlocks can be increased.

### **Excellent** sanitation.

All discharge and blow-through airlocks are manufactured entirely in stainless steel. Due to the compact design, the rotor pockets can be discharged completely. In addition, a purged seal as well as a hygienic rotor with rounded rotor pockets guarantee maximum sanitation.

## **Benefits:**

- High operational reliability
- Dependable and efficient
- Excellent sanitation
- Modular assembly
- Easily replaceable

## Modular set-up. **Designed for maximum flexibility.**

Product feed into the pneumatic conveying line: a blow-through airlock MPSS is used as feeding element below the discharge station MKSB.

## Modular design.

Thanks to a modular concept, the airlock can be used for a variety of different products. Various connection pipes allow a direct transition to the diameter of the pneumatic line.

### Easily replaceable.

Identical dimensions to existing Bühler airlocks ensure a simple replacement.

### Rotor selection for airlocks MPSS and MPST:

Standard rotor

Bevel-tipped rotor

Beveled rotor with brace

Razor-sharp beveled rotor

Hygienic rotor with rounded pockets

Shallow pocket rotor

## Discharge airlock MPST. **Technical data.**

		MPST 25/15	MPST 25/23	MPST 28/30
Rotor volume				
Standard	dm³	5,8	9,0	15,2
Shallow pockets	dm³	2,3	3,6	6,1
Weight (incl. drive)	kg	55	65	115
Volume (incl. drive)	m <sup>3</sup>	0,14	0,16	0,20
Pressure range		16.5	33.0	49.5
Operating pressure	bar	0,6	0,6	0,6
Maximum pressure	bar	0,8	0,8	0,8
Dimensions	mm			
Α		320	320	400
