

New Upgrade Kit for SORTEX FA range delivers **up to 50% false reject reduction.**

To provide fruit and vegetable processors with an extended machine lifespan and access to the most up-to-date software and technological advancements, Bühler has launched a new Upgrade Kit.

The Upgrade Kit forms part of Bühler's SORTEX FA optical sorting range for frozen and dried fruit and vegetable applications. It features ColorCam+ camera technology, ProSortX 4.0 software and new feeding options.

Processors will be able to incorporate the latest technology into their existing machines for Industry 4.0 readiness and enhanced ease of use for better yields and peace of mind. A new feeding system featuring multiple types of chutes will ensure that the sorter can handle different commodities to the highest efficiency levels, resulting in less spillage and better performance while being easier to clean.

Next-generation ColorCam+ camera technology will enable processors to achieve higher yields, a false reject reduction of up to 50%, less wastage, and impressive cost savings.

Peter Denhard, Head of Business Development for Customer Services at Bühler, says: "Our new Upgrade Kit allows our customers to keep their existing machines while refreshing their processing activities and staying competitive in the market."

"With the Upgrade Kit, processors will be able to see more and thus clean their product better. This will boost their reject concentration, improve throughput, and subsequently boost their profits!"

Stephen Jacobs, Head of the Fruit and Vegetable segment at Bühler, adds: "ProSortX 4.0 will also make our customers' machines easier to use and increase the quality of their final product. They'll be able to access statistical information to produce better reports for their customers, as well as a range of connectivity options for Industry 4.0 readiness."

Joel Chase, Product Manager for the SORTEX F optical sorter at Bühler, notes: "We're pushing the technological boundaries in the market. The more we push the standards in the market, the better quality and better reject concentration processors, on the whole, will have."
